Calder Wheels

COMMERCE & INTEGRATION PLATFORM AGREEMENT

Prepared for: Ray Shadravan / Calder Wheels
Prepared by: Cove Digital LLC
Date: August 28, 2026

1. Parties

This Agreement is entered into by and between:

Cove Digital LLC ("Provider") — a limited liability company providing digital commerce development and integration services.

Ray Shadravan on behalf of **Calder Wheels** ("Client") — a build-to-order wheel manufacturing company.

2. Scope of Work

The Provider will deliver a custom e-commerce and integration platform for Calder Wheels. The scope comprises two workstreams.

Workstream 1 — Commerce & Dealer Platform — $11,750

- **Shopify Storefront** — Premium, photography-led, dark/luxury Calder-branded store. Homepage, wheel catalog, product pages, galleries, responsive mobile layout, customer accounts, checkout, SEO/AEO and analytics foundation.
- **Wheel Configurator** — 2D layered-image configurator: center finish × barrel/lip finish × hardware finish. Live visual preview, real-time price updating. Up to 5 initial wheel designs and 60 configuration combinations. Availability gate tied to Bill-of-Materials component stock. Vehicle-on-car visualizer excluded (Phase 2).
- **Retail Ordering** — Standard DTC flow: configure → price → cart → payment → order.
- **Vehicle Fitment Finder** — Year → Make → Model → Generation/Trim → compatible wheels. Never surface incompatible products. Manual curated database (ACES/PIES not included).
- **Dealer / Wholesale Portal** — Dealer login and approved accounts, tiered pricing, dealer-only products, MOQ enforcement, payment terms (Net-30, prepaid/card), order history and tracking, abstracted production status. Dashboard, Quick Order, Quote Management, Dealer Catalog, Application Form screens.

Phase 2 Exclusions: Vehicle-on-car visualizer, dealer commission/spiff engine, advanced loyalty/rewards, full CRM, AI sales assistant, large-scale rendering production.

Workstream 2 — Systems Integration & Automation $4,250

- **QuickBooks Integration Service** — Web Connector setup, qbXML communication, authentication, queue management. Customer sync (Shopify → QuickBooks with duplicate protection).
- **Accounting Transaction Creation** — Order → QuickBooks invoice with customer, line items, SKU/item references, quantities, pricing, shipping, tax, and Shopify order reference.
- **BOM/Component Mapping** — Customer configuration decomposed into component recipe; BOM drives component deduction in QuickBooks.
- **ShipStation Integration** — Eligible order → ShipStation → label, tracking number, carrier, service pushed back to Shopify.
- **Integration Reliability** — Idempotency, duplicate prevention, retry logic, integration logs, error reporting, failed-job queue, exception handling.

Environment: Integration with Intuit QuickBooks Desktop Enterprise Solutions 24.0 (Windows) via QuickBooks Web Connector and qbXML SDK.

3. Architecture & System Boundaries

The integration layer (n8n + custom ledger service) acts as the single orchestrator. A custom component ledger is the single source of truth for component quantities. Shopify and QuickBooks reflect this ledger.

SYSTEM	ROLE	OWNS
Shopify	Commerce system of record	Storefront, products, configurator, checkout, payments, customer/dealer portals
QuickBooks Enterprise 24	Financial/inventory system of record	Accounting customers, invoices, items, financial inventory, COGS, payments
ShipStation	Shipping system of record	Shipments, carriers, services, labels, tracking
n8n / Cove layer	Orchestration	Data movement, BOM logic, available-to-build engine, workflow triggers, status translation, retry, exception routing

No system independently decides what another system owns. The architecture supports adding a Production & Fulfillment System (Workstream 3) later with zero redesign.

4. Timeline

Estimated: 10–12 weeks from kickoff and receipt of required product data and assets.

WEEKS	PRIMARY WORK
1–2	Final architecture, Shopify UX design, integration design
3–4	Shopify storefront + dealer portal foundation
4–6	Configurator + BOM implementation
6–8	QuickBooks Enterprise 24 integration
7–8	ShipStation + n8n workflows
8–10	Integration testing + exception handling
10–12	Beta testing, training, adjustments, launch

Several streams can run concurrently. Configurator and QuickBooks integration, for example, do not depend on each other.

5. Payment Terms

Fixed Price: $14,500

MILESTONE	AMOUNT	STATUS / TRIGGER
Kickoff	**$4,350 (30%)**	PAID — Agreement signed
Design & System Approval	**$4,350 (30%)**	Architecture, UX mockups, system design approved
Functional Beta	**$3,625 (25%)**	Site, configurator, integrations live in staging
Production Launch	**$2,175 (15%)**	Final delivery, deployment, training complete

The kickoff payment is non-refundable once discovery and design work begins. An alternative installment plan is available upon request: 25% deposit + $2,416.67 every two weeks for six payments. Invoices via Found, due within 15 days. Late payments may result in work suspension until cleared.

6. Post-Launch

30 days of post-launch stabilization included at no charge — the Provider will fix any functionality within the approved scope that is not working correctly. This is not 30 days of free new features.

PLAN	MONTHLY	HOURS	BEST FOR
Care	$350	3	Basic website
Commerce (Recommended)	**$650**	**7**	**Shopify and catalog**
Additional time	$85/hr	—	Beyond monthly allowance

New Wheel Models: Adding new wheel models — approximately $250–$650 depending on complexity, or deductible from maintenance hours.

7. Client Responsibilities

The Client agrees to provide or arrange the following:

1. **Product Renderings:** Standardized product renderings for up to 5 initial wheel designs. The Provider will prepare and configure these for the configurator. Extensive photorealistic rendering libraries are separately scoped.
2. **QuickBooks Environment:** Administrative access to a properly licensed and operational QuickBooks Desktop Enterprise Solutions 24.0 Windows environment and company file.
3. **Third-Party Subscriptions:** Shopify plan (Plus or Advanced recommended), QuickBooks Desktop Enterprise 24.0 license, ShipStation account, n8n plan, and any apps/themes/services required for the platform.
4. **Product Data:** Wheel designs, finishes, SKUs, pricing (retail and dealer tier), fitment specifications, and component inventory data.
5. **Brand Assets:** Logo, brand colors, fonts, and existing brand guidelines.
6. **Access:** Appropriate access to Shopify admin, QuickBooks environment, domain/DNS management, and relevant systems.
7. **Timely Review:** Timely feedback and approvals on deliverables to keep the project on schedule.

8. Scope Protections

1. QuickBooks Environment Assumption. The quoted integration assumes Calder provides administrative access to a properly licensed and operational QuickBooks Desktop Enterprise Solutions 24.0 environment. Windows server/hosting migration, QuickBooks repair, company-file remediation, connector replacement, network remediation, and data cleanup are outside scope.

2. Rendering Allowance. Calder supplies standardized product renderings (up to 5 designs, 60 combinations). Extensive photorealistic rendering libraries are separately scoped.

3. Third-Party Platform Changes. If Shopify, QuickBooks, ShipStation, or n8n significantly change their APIs, pricing, or capabilities during the project, scope and timeline may need adjustment. The Provider will notify the Client promptly.

4. Fitment Data. The fitment finder uses a manual curated database. ACES/PIES data licensing and integration is not included.

9. Intellectual Property

Upon full payment, the Client owns all custom code, configurations, designs, and deliverables created specifically for this project. The Provider retains the right to reuse general-purpose code, libraries, and patterns in other projects, and to display completed work in portfolios and case studies (excluding confidential financial data).

10. Confidentiality

Both parties agree to keep confidential all proprietary business information, financial data, system credentials, and trade secrets shared during the engagement. This obligation survives termination of the Agreement.

11. Limitation of Liability

The Provider's total liability under this Agreement is limited to the total fees paid by the Client. The Provider is not liable for damages arising from third-party platform failures, losses from incorrect product data supplied by the Client, or consequential, indirect, or incidental damages. The Provider is not liable for data loss where the Client has not maintained adequate backups.

12. Termination

Either party may terminate this Agreement with 14 days written notice. In the event of termination, the Client pays for all work completed up to the termination date based on the milestone payment schedule. The Provider delivers all work product completed to date upon payment. The kickoff payment is non-refundable.

13. Relationship Disclosure

This project (Calder Wheels) is a separate engagement from the E5 Wheels Automation project. The two are independent engagements with independent scopes, timelines, and deliverables.

14. Acceptance

By signing below, both parties acknowledge they have read, understood, and agree to the terms of this Agreement.
